**WILLOW
DESIGN**

A design studio & service provider offering complete, end-to-end solutions in **Building, Renovation & Restructuring** of Home Interiors & Exteriors, **Commercial Buildings, Industrial Enclaves, Hotels & Restaurants, Stadium Complexes** and so on across Kerala.

TUNED FOR TOMORROW

The use of latest technologies, equipment and installation procedures give our projects the ultimate finish, quality and perfection. As a result, we are being increasingly preferred by architects, interior designers and builders for their prestigious and futuristic projects.

STRUCTURAL GLAZING

Add the sheen of toughened glass to your exteriors. A chosen material for shopping malls, software parks and hotels to add more glitz and glamour to their facades and to give protection against the elements of nature.

ORCHESTRATING VALUE

At Willow Design, we make sure that be it product or service, the client gets the maximum value. When entrusted with a new work, our expert team goes to the drawing board, sources the best materials and finishes the project much beyond expectations, with unparalleled elegance, style and durability.

DECORATIVE GLASSES

Endow the beauty and brilliance of decorative glass to bay windows, doors, walled partitions, atriums and more of churches, mosques, hotels and even residential buildings.

TRADITIONAL TENOR

If in case a customer prefers to go by a design and décor that reflects traditional Kerala heritage and style, we at Willow Design shall be happy to adopt such a tone and tenor to our work. In fact, we can provide customized solutions as per the varied preferences and tastes of the client.

UPVC DOORS AND WINDOWS

Open doors and windows to living spaces that speak of modern looks, convenience, affordability and added value. These products are generally trouble-free and indestructible by rain or shine.

PREMIUM CURTAIN WALLS

A curtain wall is an exterior covering of a building in which the outer walls are non-structural, instead serving to protect the interior of the building from the elements. Because the curtain wall façade carries no structural load beyond its own dead load weight, it can be made of lightweight materials. The wall transfers lateral wind loads upon it to the main building structure through connections at floors or columns of the building.

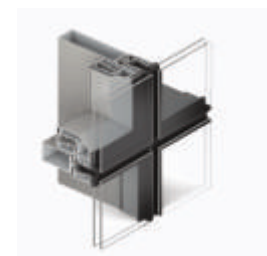

Curtain walls may be designed as "systems" integrating frame, wall panel, and weatherproofing materials. Steel frames have largely given way to aluminum extrusions. Glass is typically used for infill because it can reduce construction costs, provide an architecturally pleasing look, and allow natural light to penetrate deeper within the building.

However, glass also makes the effects of light on visual comfort and solar heat gain in a building more difficult to control. Other common infills include stone veneer, metal panels, louvres, and operable windows or vents. Unlike storefront systems, curtain wall systems are designed to span multiple floors, taking into consideration building sway and movement and design requirements such as thermal expansion and contraction; seismic requirements; water diversion; and thermal efficiency for cost-effective heating, cooling, and interior lighting.

Fully Unitized System

Semi Unitized System

PREMIUM ALUMINIUM WINDOWS & DOORS

SKY WD aluminium windows offer a varied range of window designs:

Sliding Aluminum Windows
Casement Windows
French Windows
Awning Window Tilt and Turn Windows
Slit Windows
Vertical Sliding Tilt and Slide Windows
Fixed Windows
Glass 2 Glass Corner Window

SHOWROOM SPIDER GLASS WORK

What is Spider Glazing?

Spider glazing is a type of glazing solution for exterior bolted glass assemblies. It uses point fixings to secure the glass to a support structure. Spider glazing is a complete packaged solution with glass, fixings, fasteners, and spider brackets connecting to the main structure.

Spider glazing glass used in curtain walls will ensure maximum protection against air and water infiltration while providing robust support to the exterior structure. An exquisitely modern design option, glass curtain walls are most suited for encasing the exteriors of a structure. They will allow natural light to pass through while keeping the interiors airtight. Manufactured using lightweight material, glass curtain walls require minimal maintenance. Indeed, they are a modern masterpiece in structural design

COMMERCIAL PROJECT INTERIOR

A commercial project interior description is a plan for a business space that includes the layout, furnishings, fixtures, color schemes, and decor. The goal of commercial interior design is to create a space that is practical, attractive, and meets the needs of the business.

HÄFELE

hettich

COMMERCIAL PROJECT INTERIOR

Concept development

The client and designer work together to develop a concept design for the space. This is a critical step to ensure the design meets the client's needs and vision.

Space requirements

The designer meets with the client to understand the space's use, desired style, and other needs.

Budget

The designer ensures the design meets the client's needs while optimizing the budget.

Materials

The designer sources all necessary materials, furnishings, and fixtures for the design.

Regulations

The designer takes into account airflow, heat, extraction, electrical, and plumbing regulations. Commercial interior designers work on a variety of projects, including offices, restaurants, retail stores, schools, banks, and government buildings.
